

MEDREF FULL SETUP GUIDE (FROM SCRATCH)

Prerequisites (ALL MEMBERS)

Make sure installed:

-  Git → [Git Downloads](#)
-  .NET 8 SDK → [.NET 8 Download](#)

Verify:

```
dotnet --version
```

```
git --version
```

STEP 1 — Go to your workspace folder

Example:

```
cd CSE325
```

STEP 2 — Clone GitHub repo

```
git clone https://github.com/YOUR_USERNAME/medref.git
```

Enter folder:

```
cd medref
```

STEP 3 — Create project structure

Backend (ASP.NET Core Web API)

```
dotnet new webapi -n MedRef.Server
```

Frontend (Blazor WebAssembly)

```
dotnet new blazorwasm -n MedRef.Client
```

Shared (DTO models)

```
dotnet new classlib -n MedRef.Shared
```

STEP 4 — Create Solution file

```
dotnet new sln -n MedRef
```

STEP 5 — Add projects to solution

```
dotnet sln add MedRef.Server  
dotnet sln add MedRef.Client  
dotnet sln add MedRef.Shared
```

STEP 6 — Link projects together

Server → Shared

```
cd MedRef.Server  
dotnet add reference ../MedRef.Shared  
cd ..
```

Client → Shared

```
cd MedRef.Client  
dotnet add reference ../MedRef.Shared  
cd ..
```

STEP 7 — Force .NET 8

```
dotnet new globaljson --sdk-version 8.0.420
```

STEP 8 — Verify structure

medref/

|

|—— MedRef.sln

|—— global.json

|—— MedRef.Server/

|—— MedRef.Client/

|—— MedRef.Shared/

STEP 9 — Run backend

cd MedRef.Server

dotnet run

STEP 10 — Run frontend

Open another terminal:

cd MedRef.Client

dotnet run

STEP 11 — CREATE YOUR OWN DEV BRANCH (ALL MEMBERS)

Each member creates their own branch.

 James

git checkout -b dev-james

 Nefi

git checkout -b dev-nefi

 Jeremy

git checkout -b dev-jeremy

STEP 12 — Push your branch to GitHub

Example:

```
git push -u origin dev-james
```

STEP 13 — Daily workflow (VERY IMPORTANT)

Before coding:

```
git checkout main
git pull origin main
git checkout your-branch-name
git merge main
```

After changes:

```
git add .
git commit -m "Describe your changes"
git push
```

STEP 14 — Submit Pull Request (PR)

When feature is ready:

1. Go to GitHub
 2. Click:
 - "Compare & pull request"
 3. Create PR into:
 - main
 4. James reviews + merges
-

TEAM RESPONSIBILITIES

James

- Backend API
 - Integration
 - PR review + merge
 - Database setup
 - CRUD API
-

Nefi

- Blazor UI
 - Search pages
 - Patient case forms
-

Jeremy

- README
 - QA/testing
 - Presentation
 - Screenshots
 - Documentation
-

FULL CRUD PLAN

MedlinePlus API

Operation Supported

GET 

Operation Supported

POST ❌

PUT ❌

DELETE ❌

Your Own Patient Case API

Operation Supported

Create Case ✅

Read Cases ✅

Update Case ✅

Delete Case ✅

💡 Recommended Database

For simplicity:

- SQLite ✅ (recommended for school)

🧠 Suggested Entity

Example:

PatientCase

- Id
- PatientName
- Age
- IcdCode
- ConditionTitle
- Symptoms

- Notes
 - CreatedAt
-

FINAL RESULT

A full-stack medical reference and patient case management system using Blazor, ASP.NET Core, MedlinePlus API, and full CRUD operations.
